

NEW TECHNOLOGY means **more profits**

Unimac OPTispray

Reduce
consumption,
better control

**EXAMPLE: UNIMAC
OPTISPRAY AND UNILINC
CONTROL SYSTEM**

The OPTispray™ provides a combination of shower and

bath rinses, rather than the typical multiple bath rinses, and is said to produce 22% better rinse results using nine gallons less water. Less deposition occurs because the items don't sit in the rinse water. The unit can be programmed for 41 different cycles, including nine ECO cycles for health care and hospitality special needs.

The newest addition to the technology is the control unit, which interfaces with computers and can be monitored remotely. The machine can send a wireless text message or an email to designated recipients regarding problems it is having, thus reducing time until repairs can be effected. It also records cycle times and gives a snapshot of performance, as well as helping with diagnostics in the event of a problem. For more information visit www.unimac.com.
