

UniMac® specialized hospitality laundry solutions

Since the 1940s, UniMac® has been known for developing and manufacturing some of the most innovative and cutting-edge on-premises laundry equipment in the industry.

Through the years, the company has continued to expand, helping customers in a variety of markets including hospitality, long-term care, corrections, fire, athletics, military and many more. UniMac has maintained its position as the market leader with a reputation for unmatched industrial-quality and efficiency, continually striving to improve equipment and controls.

UniMac technology provides customers with the lowest cost of ownership in OPL by offering world-class, quality products and services designed to address challenges that on-premises laundry operators face every day.

Hospitality laundry operators have come to trust and rely on UniMac to provide the most durable and technologically-advanced equipment available. UniMac

works closely with lodging customers to identify and address key concerns that they may face.

One such hospitality concern continues to be rising utility costs. Despite these increased costs, lodging trends are moving towards bedding packages that contain 30 percent more linens, which means that it takes more time to launder bedding. That is why UniMac machines are designed with the fastest possible wash and dry times to keep laundry operating as efficiently as possible.

Additionally, UniMac offers an easy-to-operate control system that reduces employee training time. The control system includes new technologies that reduce labor costs even further with industry-leading rinsing technology and drying times, which can save as much as an hour of labor each day.

As an Alliance Laundry Systems brand, UniMac benefits from the company's industry-leading services such as in-house financing, laundry design, Genuine Parts, a state-of-the-art test lab and customer support offered through a global network of committed and experienced distributors, who are true OPL laundry experts.

Whether customers require industrial-size machines or something smaller for niche cleaning, they can rely on UniMac to meet their needs at the lowest operating

cost in the industry. UniMac is committed to developing and offering innovative technology that lowers energy use and increases productivity.

UNIMAC PRODUCT MILESTONES

■ In the late 1940s, UniMac's Norman McEwen invented the

first washer-extractor capable of washing, rinsing and extracting 60 to 90 pounds of laundry per hour.

■ UniMac introduced the industry's first super-high speed washer-extraction device.

■ UniMac launched the first programmable, micro-controlled on-premises laundry washer-extractor.

■ UniMac invented, and received a patent for, its distinctive spray rinse technology.

■ UniMac introduced a 150 pound washer-extractor.

■ UniMac was the first OPL manufacturer in North America to introduce a networked control, UniLinc™, for washer-extractors, allowing laundry managers to monitor laundry operations from a remote location.

■ UniMac announced UniLinc was available for tumble dryers – same control for both washer-extractors and tumblers – a first for the industry.

■ In 2013, UniMac introduced the new OPTispray™ Rinsing Technology and ECO Cycles for UW45 and UW65 washer-extractors, delivering water savings, creating a shorter rinse cycle and increasing throughput.

IF YOU DON'T HAVE **OPTISPRAY™** YOUR LINENS AREN'T THE ONLY ONES TAKING A BATH.

An inefficient rinse is money down the drain. With a combination of bath and spray rinses, new OPTISpray™ Rinsing Technology utilizes unique spray hardware and exclusive software to minimize the water and time needed to rinse a load while also delivering far superior rinse results. OPTISpray uses less water, saving up to \$2,110 in yearly utility expenses compared to popular models with only bath rinses. To lower costs even further, industry-leading 400 G-Force extraction delivers maximum water removal and increased throughput. Innovative features like UniLinc™ paired with OPTidry™ offer complete laundry room control, minimize operating costs and optimize efficiency to save you even more time and money. It all combines with unmatched durability and performance to provide hotels, motels and inns of any size with the absolute lowest cost of ownership in the industry.

SPECIAL FINANCING AVAILABLE. 4.50% finance rate on UniMac® washers and dryers. Limited-time offer.

Contact an authorized UniMac distributor today to run a laundry operating analysis and see how you can cut costs and save money. Visit UNIMAC.COM/OPTISPRAY or call **1-800-587-5458**.
