### **UniMac's sturdy washer-extractor**

» The new UW45 and UW65 hardmount washer-extractors from UniMac offer premium, industrial-quality efficiency and durability at an attractive price and packaged in a modern, sleek design. They're built to handle a spinning force twice that of most commercial washer-extractors, as well as the largest and most cut-of-balance loads, resulting in less downtime.

The machines use a new drive shaft assembly that has cylindrical front and spherical rear bearings to handle heavy loads and that last longer than traditional ball bearings; the larger shaft diameter is 200% stronger than cabinet hardmount shafts. For more information, contact the company at 800-587-5458; [unimac.com](http://unimac.com). —
